M-Files Now Available for Windows Phone 7.5

[M-Files Puts Easy Document Management in the Hands of "Mango"](#) Users

DALLAS, **January 30, 2012**: M-Files Inc., the developer of [M-Files](#) easy document management software and the cloud-based document management service [M-Files Cloud Vault](#), today announced support for the [Windows Phone 7.5](#), also known as "Mango."

Windows Phone 7.5 is a major software update for Windows Phone, the mobile operating system from Microsoft. The first devices pre-loaded with Windows Phone 7.5 became available in late 2011. Windows Phone 7.5 users can utilize M-Files Mobile Access to retrieve important company documents on the go such as sales and marketing collateral, contract templates, project documentation and other vital information.

"With M-Files Mobile Access, Windows Phone 7.5 users can access documents stored in centralized repositories, whether cloud-based or via on-premise servers behind company firewalls," said Greg Milliken, president of M-Files Inc. "M-Files customers using 'Mango' can access and review documents as well as participate in automated business processes and workflows directly from their mobile device."

In addition to supporting Windows Phone 7.5, M-Files Mobile Access is also available on the following devices:

- iPhone and iPad
- Android
- BlackBerry
- Symbian S60

M-Files eliminates the need for chaotic Windows folders by organizing documents using simple tags and keywords. With M-Files, users store documents in a centralized vault, the same as they would on any other hard drive on their system or network, but rather than repeatedly searching for the right folder, users simply save documents to the vault and tag. M-Files works like Windows Explorer, so the user interface is familiar to any Windows user and minimizes changes to the way employees work. The M-Files vault is accessed just like My Documents or My Computer, it's just faster and more secure, and finding files is as simple as typing in a tag or performing a full-text search right from the *Open* or *Save* dialog box of any Windows application. M-Files is also available as a cloud-based service known as M-Files Cloud Vault that runs on the Windows Azure platform, eliminating the need to purchase and configure a server and providing all the benefits of M-Files for a low monthly fee.

About M-Files Inc.
M-Files Inc. develops M-Files professional document management software and the cloud-based document management service M-Files Cloud Vault that runs on the Windows Azure platform.
