

TESTIMONIAL OPEN RANGE ENGINEERING SERVICES

ARCHITECTURE, ENGINEERING & CONSTRUCTION | PAMPA, TEXAS

Dan Miller
Design Specialist

“As an engineering and design firm, our proposals progress through different functional groups in a review cycle that spans from scope work, project deployment, engineering involvement, drawing creation and ownership to approval and completion. The workflow capabilities in M-Files help our projects stay on track. Emails are now automatically sent to each person in the project cycle to alert them to the state of the project so they can schedule their work and keep the project moving. No longer are projects stalling because of lack of communication. With M-Files, we’ve **INCREASED THE ON-TIME DELIVERY RATE OF OUR PROJECTS BY 25%.**”

“In the past, project status reviews by management would only occur every other week. Now with M-Files, management is able to track the progression of projects instantly and at any time, which has helped tremendously in **KEEPING PROJECTS ON TRACK AND WITHIN BUDGET.**”

“We have certain components that are used repeatedly in projects. With M-Files we can quickly search for a component within DWG files and pull it into an AutoCAD drawing for a new project, which allows us to develop standards for components that are used frequently. This ability saves us the time of redrawing components over and over again in our designs, which has resulted in **60% IMPROVEMENT IN PRODUCTIVITY IN THE PROJECT DESIGN PHASE.** It has also helped give our projects a consistent look and maintain our quality in construction.”

“Having greater insight into both in-process and completed projects provides us with a better understanding about how a project evolves, which enables us to justify scope changes when adjustments are made. We also found that we were not accounting for every task in a project, which resulted in projects going over time and budget. We now are **MORE ACCURATELY SCOPING PROJECTS** so that we are more consistently on time and within budget. ”
